Dear Hiring Manager,

My name is Chimuanya and I am a software engineer. I have been developing web and command-line interface applications for over 2 years. Most of my experience lies in backend development where Python and Django are the core technologies utilized. I have also worked with HTML, CSS/Bootstrap and JavaScript, and a little bit of PHP.

In my role as a software developer at N.U.E Offshore Resources Ltd, I was in charge of developing innovative solutions across a variety of software platforms. I was instrumental in developing the company's employee management system for keeping track of all employee data. I was in charge of the full development cycle of the company's recruitment web application. I also assisted in writing the documentation for these apps.

During the mandatory lockdown due to the COVID-19 virus, I built a simple hospital management system to keep track of a patient's medical history. I also gained some level of experience in scientific computing and python for data science.

You will find high-level summaries of my experience in my resume. If you want to see the open-source codes to some of the projects I have worked on so far, check out my GitHub profile: github.com/bruce619. You can also see the links to some of the applications in my LinkedIn project section: linkedin.com/in/chimuanya-ibecheozor. Some of the projects in my GitHub are mostly boilerplate projects that are not finalized. I do not feel that they are accurate representations of the quality of work that I bring as a full-time employee but it will give you a sense of the technologies that I work with frequently.

Thank you for your time and consideration. I'm looking forward to learning more details about the Software Engineer position. I am more than happy to create a sample web application project to showcase my software development skills.

Sincerely,

Ibecheozor, Chimuanya
